No Home Is Safe from Termite Attack!

Whatever its age, construction type, or even location, your home can fall prey to formidable pests: termites! Every year, they cause damage costing tens of millions of pesos in the Philippines alone. Globally, the figure is estimated to be in the billions. And it becomes a real disaster when you realize that insurance policies do not cover this kind of damage. For you as a homeowner, this can mean major repair costs – especially since termites work in secret. A long time can pass before the damage is detected. It's critical that you take action to treat your home before it's too late!

Keep Your Home Safe with **Termidor®**

When it comes to the devastation caused by termites, it's better to be prepared than to suffer! Don't wait for these pests to find your home, talk to your qualified professional, who will be able to give you effective support with **Termidor®**, the world's number one termiticide! Benefiting from the latest technological innovations in the field of insecticides, **Termidor®** protects your home from the moment treatment begins, because – unlike other products – it's undetectable by termites. The result? In combination with the expertise of your qualified professional, **Termidor®** gives your home thorough, long-lasting protection.

Termidor®, the Effective Choice

As demonstrated by tests performed at top universities, the effectiveness of **Termidor®** is unrivaled – and unbeatable. Why? Simply because its revolutionary formulation allows it to act more quickly and with greater impact than any other anti-termite product, both inside and out. When used as a preventative measure, **Termidor®** even stops termites from entering your house by creating a genuinely undetectable insecticide barrier. Thousands of field trials carried out around the world have shown the product to be effective for five years. Use **Termidor®** for long-term peace of mind!

Termidor®, Simply the Best Termiticide on the Market

Like many termite control products, **Termidor®** is a liquid formulation. But the comparison ends there: other termiticides merely have a repellent action – and are therefore detectable and avoidable by the insects – whereas **Termidor®** creates an undetectable chemical barrier around your home. Not sensing the danger, the termites do not avoid the treated area and thus find themselves contaminated. Furthermore, **Termidor®**'s unique transfer effect means that exposed termites pass the insecticide on to their fellow pests before dying – ensuring maximum efficiency!

Termidor®, More Effective Than a Trap

There are many termite trapping systems on the market, but their action is limited because the insecticide must make physical contact with the termite for it to be effective. There is no guarantee that the insect will make its way toward the trap, so instead it continues to cause damage. When the termite reaches the trap, it will still take the product many months to have any real impact in terms of parasite control. **Termidor®** is effective immediately, and its action is thorough both inside and outside building structures.

Termidor® is a registered trademark of BASF.

Termidor® has been used for over 20 years, protecting millions of homes.

Termidor® is a product for professionals. Use biocides safely.

Always read the label and product information before use.
